

Course Title:
Nuclear Cyber & Information Security Awareness – Part Two

Duration: 3 hours

Target audience:

This course is suitable for all technical and non-technical employers and employees who are involved with, or have responsibility or oversight for, cyber & information security compliance and governance in the nuclear industry and its supply chain.

Pre-requisites:

Attendees should have either completed Part 1 or have a good awareness of cyber security actions and consequences relating to business operations.

Aims:

- Identify legal & regulatory requirements relevant to the nuclear industry
- Understand how an information security management framework can enable compliance
- Understand the implications to both individuals and companies of not having an information security strategy
- Learn the importance of developing recovery & incident plans, monitoring, testing and continuous improvement activities

Course outline:

- Putting cyber security into context for the nuclear industry
- Identifying the activities required to reduce cyber risk
- Good governance, policies & procedures
- Strategies for ongoing improvement

Method of training:

This is a highly interactive course where delegates will be encouraged to give their views and learn from each other's experience, as well as the course material presented.

Activities include break out discussions on specific scenarios or topics, with feedback to the group.
